

# Pneumatic Seals

**Your Partner for Sealing Technology**

## Your Partner for Sealing Technology

Trelleborg Sealing Solutions is a major international sealing force, uniquely placed to offer dedicated design and development from our market-leading product and material portfolio: a one-stop-shop providing the best in elastomer, thermoplastic, PTFE and composite technologies for applications in aerospace, industrial and automotive industries.

With 50 years of experience, Trelleborg Sealing Solutions engineers support customers with design, prototyping, production, test and installation using state-of-the-art design tools. An international network of over 70 facilities worldwide includes over 20 manufacturing sites, strategically-positioned research and development centers, including materials and development laboratories and locations specializing in design and applications.

Developing and formulating materials in-house, we utilize the resource of our material database, including over 2,000 proprietary compounds and a range of unique products.

Trelleborg Sealing Solutions fulfills challenging service requirements, supplying standard parts in volume or a single custom-manufactured component, through our integrated logistical support, which effectively delivers over 40,000 sealing products to customers worldwide.

Facilities are certified to ISO 9001:2008 and ISO/TS 16949:2009. Trelleborg Sealing Solutions is backed by the experiences and resources of one of the world's foremost experts in polymer technology: the Trelleborg Group.

ISO 9001:2008

ISO/TS 16949:2009

The information in this brochure is intended to be for general reference purposes only and is not intended to be a specific recommendation for any individual application. The application limits for pressure, temperature, speed and media given are maximum values determined in laboratory conditions. In application, due to the interaction of operating parameters, maximum values may not be achieved. It is vital therefore, that customers satisfy themselves as to the suitability of product and material for each of their individual applications. Any reliance on information is therefore at the user's own risk. In no event will Trelleborg Sealing Solutions be liable for any loss, damage, claim or expense directly or indirectly arising or resulting from the use of any information provided in this brochure. While every effort is made to ensure the accuracy of information contained herewith, Trelleborg Sealing Solutions cannot warrant the accuracy or completeness of information.

To obtain the best recommendation for a specific application, please contact your local Trelleborg Sealing Solutions marketing company.

# Material Overview

## ■ Surface roughness DIN EN ISO 4287

The functional reliability and service life of a seal depend to a very great extent on the quality and surface finish of the mating surface to be sealed.

Scores, scratches, pores, concentric or spiral machining marks are not permitted. Higher demands must be made on the surface finish of dynamic surfaces than of static mating surfaces.

The characteristics most frequently used to describe the surface microfinish  $R_a$ ,  $R_z$  and  $R_{max}$  are defined in DIN EN ISO 4287. These characteristics alone, however, are not sufficient for assessing the suitability in seal technology. In addition the material contact area of the surface roughness profile  $R_{mr}$  in accordance with DIN EN ISO 4287 should be demanded. The significance of this surface specification is illustrated in Fig. 1. It shows clearly that specification of  $R_a$  and  $R_z$  alone does not describe the surface roughness profile accurately enough for the seal technology and is thus not sufficient for assessing the suitability. The material contact area  $R_{mr}$  is essential for assessing surfaces, as this parameter is determined by the specific surface roughness profile. This in turn is directly dependent on the machining process employed.

Trelleborg Sealing Solutions recommends that the following surface finishes be observed:

**Table VI Surface roughness**

Surface roughness $\mu\text{m}$		
Parameter	Mating surface	Groove surface
$R_{max}$	1.0 - 4.0	< 16.0
$R_z$ DIN	0.63 - 2.50	< 10.0
$R_a$	0.10 - 0.60	< 1.6

The material contact area  $R_{mr}$  should be approx. 50 to 70%, determined at a cut depth  $c = 0.25 \times R_z$ , relative to a reference line of  $C_{ref}$ . 5%.

Surface profile	$R_a$	$R_z$	$R_{mr}$
closed profile form 	0.1	1.0	70%
open profile form 	0.2	1.0	15%

Figure 1 Profile forms of surfaces

Figure 1 shows two surface profiles, both of which exhibit nearly the same value for  $R_z$  in the test procedure. The difference becomes obvious only when the material contact area of the surface roughness profiles are compared. These show that the upper roughness profile with  $R_{mr} = 70\%$  has the better seal/mating surface ratio.

# Material Overview

## ■ Characteristics of new Zurcon® high-performance polyurethane materials

The general advantage of polyurethane materials compared with elastomer materials is based on an enormous durability a high breaking elongation and excellence elasticity.

Due to this engineers can expect high wear resistance, outstanding tear resistance and unmatched abrasion resistance even in operation with oilfree compressed air.

**Table VII**

	Material	Hardness	Temperature	Colour	Suitable for
<b>Zurcon® Z20</b>	High performance material	94 Shore A	- 35 °C to + 110 °C (short term + 130 °C)	turquoise	Rod Seals, Scrapers, e.g. ARAA, O-Rings, Cushioning Seals
<b>Zurcon® Z22</b>	Premium low temperature material	94 Shore A	- 45 °C to + 110 °C (short term + 130 °C)	dark turquoise	Rod Seals, Scrapers, e.g. ARAA, O-Rings
<b>Zurcon® Z24</b>	Special material with enhanced hydrolysis resistance	94 Shore A	- 30 °C to + 110 °C (short term + 130 °C)	green	Rod Seals, Scrapers, e.g. ARAA, O-Rings
<b>Zurcon® Z30</b>	High performance material	83 Shore A	- 35 °C to + 85 °C (short term + 100 °C)	grey-blue	Piston Seals, e.g. APDF, APDG, O-Rings
<b>Zurcon® Z32</b>	Special material with improved low temperature properties an enhanced hydrolysis resistance	83 Shore A	< - 50 °C to + 85 °C (short term + 100 °C)	cobalt blue	Piston Seals, e.g. APDF, APDG, O-Rings

Exceeding set temperature limits is possible for short periods of time with 94 Shore A materials up to + 130°C and with 83 Shore A materials up to + 100°C.

For special applications that are outside the above listed ranges please contact TSS polyurethane development department.

## ■ Characteristics of WU9E1 material

Standard polyurethane with fair performance level.

**Table VIII**

	Material	Hardness	Temperature	Colour	Suitable for
<b>WU9E1</b>	Standard polyurethane	90 Shore A	- 40 °C to + 80 °C	grey	Piston Seals, Rod Seals, Scrapers, Cushioning Seals

## ■ Characteristics of FKM - materials

Elastomeric material for pneumatic applications at high temperature. Very good thermosetting behaviour and resistance to ozone and ageing.

**Table IX**

	Material	Hardness	Temperature	Colour	Suitable for
<b>VC4VR</b>	FKM/metall combination (seal) + stainless steel (circlip)	75 Shore A	- 15 °C to + 150 °C (short term + 200 °C)	brown	Rod Seal, Scrapers

# Material Overview

## ■ Characteristics of Turcon® materials

Turcon® is a particular PTFE material for special pneumatic applications where great importance e.g. is

attached to no stick-slip effect, minimum static and dynamic friction coefficient and high wear resistance.

**Table X**

Material		Hardness	Temperature	Colour	Suitable for
<b>Turcon® T19</b>	High grade composition of PTFE resin with mineral fibre intensifier.	62 Shore D	- 50 °C to + 200 °C	dark green-grey	Double acting Glyd Ring® APG / ARG
<b>Turcon® T24</b>	High grade composition of PTFE resin with carbon additives.	62 Shore D	- 50 °C to + 200 °C	black	Double acting Glyd Ring® APG / ARG

## ■ Characteristics of Zurcon® Z80 - material

Special Polyethylene grade with ultra high molecular weight. High abrasion resistance even under poor lubrication conditions. Very good chemical resistance.

Suitable for contact with foodstuff (FDA compliant). Limited elasticity, therefore always used together with elastic energizer elements.

**Table XI**

Material		Hardness	Temperature	Colour	Suitable for
<b>Zurcon® Z80</b>	UHMWPE (ultra high molecular weight polyethylene)	52 Shore D	- 30 °C to + 80 °C (other temperature ranges on request)	white to off-white	Rod Seals, Piston Seals, Double acting Glyd Ring® APG / ARG

## ■ Different materials

**Table XII**

Material		Hardness	Temperature	Colour	Suitable for
<b>N7MM</b>	NBR/metal combination	70 Shore A	- 30 °C to + 100 °C	black	Complete Piston
<b>N7083</b>	NBR	70 Shore A	- 30 °C to + 100 °C	black	O-Ring energizer
<b>V70GA</b>	FKM	70 Shore A	- 10 °C to + 200 °C	green	O-Ring energizer
<b>U8XPA</b>	PA / TPU	80 Shore A	- 10 °C to + 60 °C	grey / black	Composite Seal

## ■ Recommendations

Lubricant information: Up to +80° C conventional lubricants for pneumatic applications are approved for

use. When using the seals within other temperature ranges please contact TSS before.

# Rod Seal - Type ARUP

## ■ Rod seal type ARUP

### Description

Single acting rod seal with U-shaped cross-section. Special lip design for pneumatic application to maintain lubricating film and minimize friction.

### Technical data

Operating pressure: 1.6 MPa

Speed: ≤ 1 m/s

Temperature: from -40 °C to +80 °C

Media: oil free air (initial grease lubrication required), lubricated air, nonaggressive gases

### Material

Standard polyurethane with fair performance level.

Standard Material: Polyurethane, 90 Shore A, Material No.: WU9E1

### Installation

Installation into split grooves or in closed grooves (above rod diameter 16). It is important to remove all sharp edges and burrs from the groove and rod before installation.

### Ordering example

Rod Seal,  
type ARUP  
Rod diameter: d = 50 mm  
Groove width: L = 7.5 mm

## Rod seal - Type ARG

### ■ Rod seal type ARG

#### Description

Double acting Glyd Ring® rod seal comprising a slipper seal and an energising O-Ring. Specially designed for low friction pneumatic applications with small installation space. Available for all diameters from 3 to 2600 mm.

#### Technical data

Operating pressure:	1.6 MPa (max. 5 MPa)
Speed:	<=5 m/s
Temperature*:	-30 °C ... +200 °C (other temperature ranges on request)
Media:	oil free air (initial grease lubrication recommended), lubricated air, nonaggressive gases - depending on the O-Ring material compatibility.

#### Material

Standard Material:	Zurcon® Z80, ultra-high-molecular weight-polyethylen, 61 Shore D, colour white to off-white. Maximum temperature: 80 °C Material No.: Z80N or Z80V *
Alternative:	Turcon® T19, high grade composition of PTFE resin with mineral fibre intensifier, 62 Shore D, colour dark green-grey. Maximum temperature: 200 °C Material No.: T19N or T19V *

\* depends on O-Ring material (N=NBR / V=FKM)

O-Ring material:	N7083 NBR 70 Shore A (-30 °C ... +100 °C)
	V70GA FKM 70 Shore A (-10 °C ... +200 °C)

#### Installation

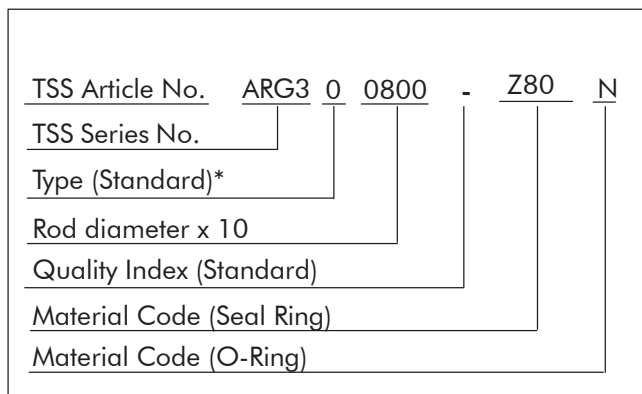

Installation into split grooves or closed grooves (above rod diameter 12 mm).  
Direct O-Ring groove installation followed by Glyd Ring® installation (note: Glyd Ring® to be deformed into kidney shape and placed into groove where Glyd Ring® reassumes original round shape.)  
It is important to remove all burrs and sharp edges from the groove and rod before installation.

#### Ordering example

Turcon® Glyd Ring® ARG complete with O-Ring.  
Standard application.  
Series ARG from Table XIV.  
Rod diameter:  $d_N = 80$  mm  
TSS Part No.: ARG300800 from Table XVI

Select the material from Table I  
The corresponding material code numbers are appended to the TSS Part No. from Table XVI.  
Together they form the TSS Article No.

Other dimensions and all intermediate sizes up to 999.9 mm diameter can be supplied.  
For rod diameters > 999.9 mm and up to 2.600 mm use the RG45 series Turcon® Glyd Ring®.

\* Ordering Turcon® Glyd Ring® with radial notches please use suffix "N" in the fifth character.

## Installation recommendation, type ARG

Figure 3 Installation drawing

Table XIV Standard installation dimensions

TSS Series No.	Rod diameter $d_N$ f8/h9		Groove diameter	Groove width	Radius	Radial clearance $S_{max}$	O-Ring diameter
	Standard range	Available range	$D_1$ H8	$L_1 + 0.15$	$r_1$	0 - 5 MPa	$d_2$
ARG0	3 - 14.9	3 - 49.9	$d_N + 4.0$	2.00	0.5	0.25	1.78

ARG4	200 - 399.9	110 - 799.9	$d_N + 15.0$	7.55	1.5	0.90	7.00
ARG8	400 - 999.9	150 - 999.9	$d_N + 18.0$	7.55	1.5	0.90	7.00

### Alternative installation with rod dimensions having tolerance f8/h9 and groove diameter tolerance H9

To obtain consistent compression of the O-Ring the recommended groove diameter tolerance is H8, but for a wide diameter range H9 is also applicable as per Table XV.

Table XV Alternative installation dimensions groove tolerance H9

TSS Series No.	Rod diameter $d_N$ f8/h9	Groove diameter
	Available range	$D_1$ H9
ARG0	3 - 29.9	$d_N + 4.0$
ARG1	6 - 79.9	$d_N + 6.0$
ARG2	7 - 249.9	$d_N + 7.5$
ARG3	16 - 449.9	$d_N + 12.5$
ARG4	110 - 399.9	$d_N + 15.0$
ARG8	150 - 399.9	$d_N + 18.0$

\* Standard diameter for Turcon® Glyd Ring® RG58

Other dimensions and all intermediate sizes up to 999.9 mm diameter can be supplied.

For rod diameters >999.9 mm and up to 2.600 mm use the RG45 series Turcon® Glyd Ring®.

# Piston Seal - Type APDE

## ■ Piston seal type APDE

### Description

Single acting piston seal with U-shaped cross-section. For double acting pistons, two seals are used "back to back".

Special lip design for pneumatic application to maintain lubricating film and minimize friction.

Suitable for cylinders with pneumatic cushioning.

### Technical data

Operating pressure: 1.6 MPa

Speed:  $\leq 1$  m/s

Temperature: from -40 °C to +80 °C

Media: oil free air (initial grease lubrication required), lubricated air, nonaggressive gases

### Material

Standard polyurethane with fair performance level.

Standard Material: Polyurethane, 90 Shore A, Material No.: WU9E1

### Installation

Snap-in installation into closed grooves. It is important to remove all sharp edges and burrs from the groove and tube before installation.

### Ordering example

Piston Seal,  
type APDE  
Piston diameter: D = 50 mm  
Groove width: L = 7.5 mm  
TSS Part No.: APDE00500 (Table XVII)  
Material No.: WU9E1

TSS Article No.	APDE0	0500	-	WU9E1

## ■ Piston seal type APDF

### Description

A seal perfectly suited for standard pneumatic applications and made from a special polyurethane type developed for piston seals.

Seal dimensions are in line with cylinder diameters according to ISO 3320.

Seal design guarantees high reliability and simple snap assembly.

The seal has an optimized, stick-slip reducing design for use in endpositioned damped cylinders with exhaust throttles.

The particular polyurethane offers exceptional wear resistance and extremely high operating performance. Special lip design for pneumatic application to maintain lubrication and minimize friction.

### Technical data

Operating pressure:	1.6 MPa
Speed:	$\leq 1$ m/s
Temperature:	-35 °C to +85 °C
Media:	oil free air (initial grease lubrication required), lubricated air, nonaggressive gases

### Material

Standard Material: Zurcon<sup>®</sup> PU, 83 Shore A, colour grey-blue  
Material No.: Z30

### Installation

Snap-in installation into closed grooves. It is important to remove all sharp edges and burrs from the groove and tube before installation.

### Ordering example

Piston Seal,  
type APDF  
Piston diameter: D = 50 mm  
Groove width: L = 7.5 mm

## ■ Piston seal type APDG

### Description

A seal perfectly suited for standard pneumatic applications and small installation space made from a special polyurethane type developed for piston seals.

Seal dimensions are in line with cylinder diameters according to ISO 3320.

Seal design guarantees high reliability and simple snap assembly.

This particular polyurethane offers exceptional wear resistance and extremely high operating performance. Special lip design for pneumatic application to maintain lubrication film and minimize friction.

The seal has an optimized, stick-slip reducing design for use in endpositioned damped cylinders with exhaust throttles.

### Technical data

Operating pressure:	1.6 MPa
Speed:	<= 1 m/s
Temperature:	-35 °C to +85 °C
Media:	oil free air (initial grease lubrication required), lubricated air, nonaggressive gases

### Material

Standard Material: Zurcon® PU, 83 Shore A, colour grey-blue  
Material No.: Z30

### Installation

Snap-in installation into closed grooves. It is important to remove all sharp edges and burrs from the groove and tube before installation.

### Ordering example

## ■ Piston seal type APDS

### Description

Single acting piston seal with U-shaped cross-section. For double acting pistons, two seals are used "back to back". Same design as APDE-type, but lower interference of the dynamic lip for reduced friction and break-off pressure. Recommended for return spring cylinders. Note: good guiding system required. Suitable for cylinders with pneumatic cushioning.

### Technical data

Operating pressure: 1.6 MPa

Speed:  $\leq 1$  m/s

Temperature: from -40 °C to +80 °C

Media: oil free air (initial grease lubrication required), lubricated air, nonaggressive gases

### Material

Standard polyurethane with fair performance level.

Standard Material: Polyurethane, 90 Shore A,  
Material No.: WU9E1

### Installation

Snap-in installation into closed grooves. It is important to remove all sharp edges and burrs from the groove and tube before installation.

### Ordering example

Piston Seal,

## ■ Piston seal type APMP

### Description

Single acting piston seal with integrated guiding element and buffer for mechanical cushioning. For double acting pistons, two seals are used "back to back". Suitable for short stroke cylinders and/or magnetic pistons. The magnet is protected between the piston seals.

### Technical data

Operating pressure: 1.6 MPa  
 Speed:  $\leq 1$  m/s  
 Temperature: from -40 °C to +80 °C  
 Media: oil free air (initial grease lubrication required), lubricated air, nonaggressive gases

### Material

Standard polyurethane with fair performance level.

Standard Material: Polyurethane, 90 Shore A,  
 Material No.: WU9E1

### Installation

The installation is done by forced overlapping on the piston diameter, shaped in a proper way to fit the retainer tooth of the seal.

### Ordering example

# Piston Seal - Type APG

## ■ Piston seal type APG

### Description

Double acting Glyd Ring® piston seal comprising a slipper seal and an energising O-Ring. Specially designed for low friction pneumatic applications with small installation space. Suitable for cylinders with pneumatic cushioning. Available for all diameters from 6 to 2700 mm.

### Technical data

- Operating pressure: 1.6 MPa (max. 5 MPa)
- Speed: ≤ 5 m/s
- Temperature\*: -30 °C ... +200 °C (other temperature ranges on request)
- Media: oil free air (initial grease lubrication recommended), lubricated air, nonaggressive gases - depending on the O-Ring material compatibility.

### Material

- Standard Material: Zurcon® Z80, ultra-high-molecular weight-polyethylen, 61 Shore D, colour white to off-white. Maximum temperature: 80 °C Material No.: Z80N or Z80V \*
- Alternative: Turcon® T19, high grade composition of PTFE resin with mineral fibre intensifier, 62 Shore D, colour dark green-grey. Maximum temperature: 200 °C Material No.: T19N or T19V \*

\* depends on O-Ring material (N=NBR / V=FKM)

- O-Ring material: N7083 NBR 70 Shore A (-30 °C ... +100 °C)  
V70GA FKM 70 Shore A (-10 °C ... +200 °C)

### Installation

Installation into colsed grooves above piston diameter 15 mm (above 10 mm for T19). Direct O-Ring installation followed by snap in Glyd Ring®. When Glyd Ring® is mounted over a wear ring groove an installation sleeve must be used (specimen drawing upon request). It is important to remove all sharp edges and burrs from the groove and tube before installation.

### Ordering example

Turcon Glyd Ring APG complete with O-Ring. Standard application. Series APG from Table XXIII  
Piston diameter:  $D_N = 270$  mm  
TSS Part No.: APG802700 from Table XXV

Select the material from Table I. The corresponding code numbers are appended to the TSS Part No. from Table XXV. Together they form the TSS Article number.

Other dimensions and all intermediate sizes up to <999.9 mm diameter can be supplied. Fore bore diameters >999.9 mm and up to 2.700 mm use the PG46 series Turcon® Glyd Ring®.

\* Ordering Turcon® Glyd Ring® with radial notches please use suffix "N" in the fifth character.

## Installation recommendation, type APG

\* Standard diameter for Turcon® Glyd Ring® PG59

Other dimensions and all intermediate sizes up to 999.9 mm diameter can be supplied.

For bore diameters >999.9 mm and up to 2.700 mm use the RG46 series Turcon® Glyd Ring®.

# Complete piston - Type AK

## ■ Piston seal type AK

### Description

Ready-to-install double acting piston with integrated metal disc and sealing lips. The rubber cover on the sides of the metal disc has air channels to ensure pressure application on the full piston surface.

### Technical data

Operating pressure: 1.2 MPa

Speed:  $\leq 1$  m/s

Temperature: -30 °C ... +100 °C (other temperature ranges on request)

Media: oil free air (initial grease lubrication required), lubricated air, nonaggressive gases

### Material

Standard Material: Material combination NBR 70 Shore A / carbon steel 1.0315 (fully rubber covered).  
Material No.: N7MM

### Installation

Ready-to-install piston to be pushed onto the end of the rod and fixed with a nut.

### Ordering example

Piston Seal  
type AK  
Bore diameter: D = 63.0 mm  
Outside diameter: d = 16.0 mm  
Ring width: B = 22 mm  
TSS Part No.: AK1606322 (Table XXVI)  
Material No.: N7MM

# Piston Seal - Type ARS

## ■ Piston seal type ARS

### Description

A seal-scraper perfectly suited for high temperature pneumatic applications and applications with aggressive media, made from FKM as rubber metal bonded seal.

The ARS seal-scraper offers exceptionally high operational performance and strength. The design allows easy assembly into open grooves and is fixed by a circlip.

Assembly space equal to ARAA, ARAN and ARV items.

### Technical data

- Operating pressure: 1.6 MPa
- Speed:  $\leq 1$  m/s
- Temperature:  $-15\text{ }^{\circ}\text{C}$  to  $+150\text{ }^{\circ}\text{C}$
- Media: oil free air (initial grease lubrication required), lubricated air, nonaggressive gases

### Material

- Standard Material: FKM, 75 Shore A, colour brown  
Material No.: VC4VR
- Special elastomer on the basis of FKM with an integrated vulcanised steel supporting disk.
- A circlip according DIN 7993 vers. B for fixing the seal in the groove included in delivery.

### Installation

Installation into open groove and fixation with a circlip. If there is a removal notch the ARS-seal-scraper may be exchanged without removing the piston rod.

### Ordering example

- Piston Seal type ARS
- Rod diameter: D = 50 mm
- Groove width: L = 10.4 mm
- TSS Part No.: ARS00500 (Table XXVII)
- Material No.: VC4VR

# Seal-Scraper - Type AWNS

## Seal-Scraper type AWNS

### Description

Asymmetric lip seal with sealing lip and scraper lip. Small groove dimensions and double function allow space and cost savings.

### Technical data

Operating pressure: 1.6 MPa

Speed:  $\leq 1$  m/s

Temperature: from -40 °C to +80 °C

Media: oil free air (initial grease lubrication required), lubricated air, nonaggressive gas

### Material

Standard polyurethane with fair performance level.

Standard Material: Polyurethane, 90 Shore A, Material No.: WU9E1

### Installation

Installation into split grooves or in closed grooves (above rod diameter 12). It is important to remove all sharp edges and burrs from the groove and rod before installation.

### Ordering example

Seal-scraper,  
type AWNS  
Rod diameter: d = 20 mm  
Groove width: L = 7 mm  
TSS Part No.: AWNS10200 (Table XXVIII)  
Material No. WU9E1

## ■ Seal-scraper type AWSD

### Description

Asymmetric lip seal with sealing lip and scraper lip. Small groove dimensions and double function allow space and cost savings. Special design facilitates installation especially for small diameters.

### Technical data

Operating pressure: 1.6 MPa  
 Speed:  $\leq 1$  m/s  
 Temperature: from  $-40$  °C to  $+80$  °C  
 Media: oil free air (initial lubrication required), lubricated air, nonaggressive gases

### Material

Standard polyurethane with fair performance level.

Standard Material: Polyurethane, 90 Shore A,  
 Material No.: WU9E1

### Installation

Installation into split grooves or in closed grooves. It is important to remove all sharp edges and burrs from the groove and rod before installation.

### Attention

For all rod diameters above 20 mm, we recommend only the groove design with oversized step (type L<sub>1</sub> in Fig.14, page 39).

### Ordering example

Rod wiper,  
 type AWSD  
 Rod diameter:  $d = 20$  mm  
 Groove width:  $L = 4$  mm  
 TSS Part No.: AWSD00200 (Table XXIX)  
 Material No.: WU9E1

# Seal-Scraper - Type ARAA

## Seal-Scraper type ARAA

### Description

Rod seal-scraper with integrated fixing capability. Compared to ARAN improved in seal-lip design for better sealing and scraping performance. Very good protection against dirt ingress.

Assembly space equal to ARAN, ARS and ARV items.

This particular polyurethane offers exceptional wear resistance and extremely high operating performance. Special lip design for pneumatic application to maintain lubricating film and minimize friction.

For high humidity applications an alternative material with improved hydrolysis resistance is available.

### Technical data

- Operating pressure: 1.6 MPa
- Speed:  $\leq 1$  m/s
- Temperature: -35 °C to + 110 °C
- Media: oil free air (initial grease lubrication required), lubricated air, nonaggressive gases

### Material

Standard Material: Zurcon® PU, 94 Shore A, colour turquoise  
Material No.: Z20

### Installation

The ARAA-seal-scraper snaps into a special groove. Separate fixing elements are not necessary. It is important to remove all sharp edges from the groove and shaft to prevent damaging the seal / seal lips. Note: Avoid grease on outer diameter and groove.

### Ordering example

Piston Seal

## Wipers for guiding units - Type AWBB

### ■ Wipers for guiding units, type AWBB

#### Description

Wiper specially designed for guide units with linear ball bearings. Wiper lip with minimal pre-load to avoid negative influences on the sliding behaviour of the guide unit. The outer diameter is designed for fixing by a standard circlip retainer groove.

The installation dimensions correspond to the housing diameter of the ball bearing.

#### Technical data

Operating pressure: -

Speed:  $\leq 4$  m/s

Temperature: from  $-40$  °C to  $+80$  °C

#### Material

Standard polyurethane with fair performance level.

Standard Material: Polyurethane, 90 Shore A,  
Material No.: WU9E1

#### Installation

Installation by snapping the fixing collar into a standard circlip retainer groove.

It is important to remove all sharp edges and burrs from the groove and rod before installation.

#### Ordering example

Wiper,

type AWBB

# Seal-Scraper - Type ARV

## Seal-Scraper type ARV

### Description

Asymmetric Variseal® type seal with spring energized sealing lip and scraper lip. Suitable for poor lubrication, high speed or foodstuff application (FDA compliant). Very good protection against dirt ingress. (Hi-Clean version available where the spring cavity of the scraper lip is filled with a Silicone gel preventing contaminants from being entrapped.)

Special groove and seal design allows fast installation either automatically or manually.

### Technical data

Operating pressure: 1.6 MPa  
Speed: <= 5 m/s  
Temperature: -30 °C to +80 °C  
other temperature ranges on request

Media: oil free air with or without initial grease lubrication, lubricated air, nonaggressive gases, foodstuff

### Material

Standard Material: Ultra-high-molecular weight-polyethylene, 52 Shore D, colour white to off white  
Material No.: Z80S

V-spring: standard materials AISI 301

### Installation

Snap-in installation into open grooves. It is important to remove all sharp edges and burrs from the groove and rod before installation. Note: Inlet chamfer on rod and bore diameter required.

### Ordering example

Rod wiper,  
type ARV  
Rod diameter: d = 20 mm

## Cushioning Seal - Type AICM

### ■ Cushioning seal, type AICM

#### Description

The cushioning seal AICM is designed especially for pneumatic cushioning where high pressure peaks occur. Effective cushioning due to lip sealing with inlet chamfer. After change of pressure direction, the integrated check valve function ensures pressure application on the full piston surface.

#### Technical data

Operating pressure:	1.6 MPa
Speed:	≤ 1 m/s
Temperature:	Z20 -35 °C to +110 °C WU9E1 -40 °C to +80 °C
Media:	oil free air (initial grease lubrication required), lubricated air, nonaggressive gases

#### Material

Standard:	Zurcon® PU, 94 Shore A, colour turquoise Material No.: Z20
-----------	---------------------------------------------------------------

\* Available dimensions on request.

Alternative:	Standard polyurethane with fair performance level. Polyurethane, 90 Shore A, Material No.: WU9E1
--------------	--------------------------------------------------------------------------------------------------------

#### Installation

Snap-in installation into closed grooves. It is important to remove all sharp edges and burrs from the groove and rod before installation.

#### Ordering example

# Cushioning Seal - Type AIAS

## ■ Cushioning Seal, type AIAS

### Description

The cushioning seal AIAS is designed especially for pneumatic cushioning where high pressure peaks occur. Small groove dimensions to replace O-rings. After change of pressure direction, the integrated check valve function ensures pressure application on the full piston surface.

### Technical data

Operating pressure: 1.6 MPa

Speed:  $\leq 1$  m/s

Temperature: from -40 °C to +80 °C

Media: oil free air (initial grease lubrication required), lubeicated air, nonaggressive gases

### Material

Standard polyurethane with fair performance level.

Standard Material: Polyurethane, 90 Shore A,  
Material No.: WU9E1

### Installation

Snap-in installation into closed grooves. It is important to remove all sharp edges and burrs from the groove and rod before installation.

### Ordering example

Cushioning seal,  
type AIAS  
Rod diameter: d = 50 mm

## ■ Wear ring in modified POM for piston and rod

### Description

The wear ring has the twin function of guiding the piston or the rod in a cylinder and of absorbing transversal forces in it.

At the same time, the metal contact between the sliding parts of the cylinder (piston and bore or cylinder rod and cylinder head) must be avoided.

The wear ring in modified POM material has been specifically designed for the use on such pneumatic cylinders.

The ring is available for a wide range of standard dimensions (see tables XXXIX and XXXVIII, page 56 and 59). Other dimensions are available on request.

The TSS Serial No. for wear rings in modified POM are listed in the following table.

**Table XXXVII TSS Serial numbers for injection molded wear rings in modified POM**

Piston TSS Serial No.	Rod TSS Serial No.	Groove width L <sub>2</sub>	Ring thickness W
GP41	GR41	2.50	1.55
GP43	GR43	4.00	1.55
GP48	GR48	8.20	2.00
GP49	GR49	9.70	2.00
GP51	GR51	10.00	2.00
GP53	GR53	15.00	2.00
GP54	GR54	20.00	2.00
GP55	GR55	25.00	2.00
GP56	GR56	30.00	2.00

Other materials and dimensions available - see also "Hydraulic catalogue chapt. Slydrings" or ask TSS.

All wear guide rings have chamfered edges, in order to avoid undesired edge forces in the corner radii of the grooves.

The choice for the correct size of the ring can be based on the following formula:

$$h = \frac{F \times f}{d \times p}$$

where the meaning of the letters are the following:

p = admissible pressure

F = radial load

f = safety factor

d = average guide diameter

h = guide width

### Material

#### POTBW

This compound in polyacetal was specifically formulated for pneumatic cylinders made in aluminium.

#### Advantages:

- Good price/performance ratio
- High compressive strength
- Very good sliding effect in dry conditions
- Good resistance to abrasion
- Low stick-slip effect
- Simple installation also in closed grooves
- Long life

## Fields of application

Speed: Up to 1 m/s, with reciprocating movements.

Temperature: from -40 °C to +110 °C

Calculation value:  
Static compressive strength: max. 36.3 N/mm<sup>2</sup> at room temperature.

The load capacity for dynamic applications most depends on the operating temperature, which, therefore, should not exceed 90 °C.

## Static Seal - Type DRV4

### ■ Static Seal type DRV4

#### Description

The DRV4-seal is a static operating seal ring developed for pneumatic applications. It is a 2-component-injection-molding part (plastics / polyurethane).

DRV4-seal is conform according ISO 16030 and achieves the following properties:

- captive on thread (triple-lug principle)
- reusable (up to 5 - 10 x)
- capable of providing long-term performance

In addition DRV4 offers more advantages:

- close by hand-torque
- no corrosion, because plastics-polyurethane-bonded
- long-time tight
- excellent automatically mountable
- lightweight

#### Technical data

Operating pressure: 1.0 MPa  
 Temperature: -10 °C to +60 °C

#### Material

basic ring: PA, grey  
 seal: TPU, black

#### Installation

The seal has only to be fitted on the threaded bolt. If the bolted connection is tightened the sealing lip is pressed against the flat surfaces. The thickness of the basic ring limits the compression of the elastomer seal. Sealing effects will already be achieved by hand-torque.

#### Ordering example

Static Seal,
